Abstract

A method of combining at least two received signals (A, A')
of a telecommunication system is described. A first
combining algorithm (B1) is processed for providing a
resulting signal (S1). A second combining algorithm (B2) is
processed for providing a second resulting signal (S2). One
of the two resulting signals (S1 or S2) is selected,
wherein the selection is depending on the two resulting
signals (S1, S2).
